ellman’s radiofrequency technology has received worldwide acclaim and recognition from leading surgeons, clinics, universities and authors.

The ellman® radiowave energy source represents advanced radiowave technology that provides outstanding surgical control, precision and versatility. Clinical benefits include reduced post-operative discomfort, minimal scar tissue formation, enhanced healing and excellent cosmetic results.

The patented Surgitron® Dual RF™ Frequency unit represents advanced radiowave technology that provides unparalleled surgical control, precision and versatility. The high frequency of 4.0 MHz minimizes heat dissipation and thus cellular alteration. The system generates 120 watts of power and operates at 4.0 MHz in a monopolar mode and 1.7 MHz in bipolar mode.

**Clinical Benefits Include:**
- Reduced post-operative discomfort¹
- Minimal scar tissue formation²
- Maximum readability of histologic specimen³
- Enhanced healing⁴
- Excellent cosmetic results⁵

The ellman® Single-Use Neutral Plate is a sensing, pre-gelled, self-adhering, dispersive pad. The effective electrodes are two aluminum oil conductors, covered by a hydrogel conductive adhesive. The conductive hydrogel provides a low-current density return path from the patient to the RF Device while the two foils provide a means of sensing contact quality.

The Surg-e-Doc™ offers the following advantages:

**Extra Monopolar port**
The Surg-e-Doc™ offers the ability to utilize an extra monopolar port. This added versatility eliminates the need to change monopolar electrodes within the same handpiece during a procedure.

**Simultaneous activation of Surg-e-Vac™**
The Surg-e-Doc™ extends the life of the vacuum unit by automatically activating the Surg-e-Vac™ only when the RF energy source is activated. Moreover, the Surg-e-Vac™ will continue vacuuming for 5 seconds after the RF energy source is deactivated. This allows for automatic removal of residual plume.

**Less Clutter**
The Surg-e-Doc™ eliminates the need for separate footswitch activation of Surg-e-Vac™. This reduces clutter since the only footswitch needed is that of the RF energy source.

Steri Caps™ enable you to control in total sterility with autoclavable protective dial covers.

The Bipolar Converter provides the surgeon the convenience of switching the ellman® Surgitron® EMC from the Handpiece in monopolar mode to the Bipolar Forceps mode with the simple flick of a switch. This eliminates the need to plug and unplug the cords during surgery.

The Wall Bracket space saving accessory attaches easily to any vertical surface. The ellman® Wall Bracket will support up to 40 lbs. and is ideal for the Surgitron® EMC.

RF ELECTRODES

Electrodes

Proximal shaft diameter is available in 3/32” or 1/16” (2.4mm or 1.6mm) to accommodate standard handpiece connection.

---

ABOUT ellman® Electrodes:

The insulated shaft of most electrodes can be bent or contoured for all surgical procedures.
(Note: Empire microincision™ Sterile Needles are not bendable)

Yellow electrode tips are Sterile/Single-Use disposables
Blue electrode tips are re-usable
Orange electrode tips are re-usable
Purple electrode tips are re-usable
White electrode tips are a mixture of re-usable and disposable.
See product catalog for details

*Electrodes are displayed in actual size.

Needle Electrodes are commonly used for incisions and excisions in precise surgical procedures.

Round Loop Electrodes are commonly used for shaving lesions, contouring tissue and obtaining biopsy specimens.

Choice of Wire Gauge

Super Fine - Used when minimal tissue alteration is desired.
Fine - Used when less tissue alteration is desired.
Regular - Used to produce more coagulation.

Scalpel Electrodes are commonly used for incisions and excision of tissue. The blade shape provides broader coagulation than a needle electrode.

Empire® MicroTip Needles are tapered and have a pinpoint design which produces micro-smooth cutting and coagulation while creating less tissue alteration.

Insulated Needle Electrodes are used for the treatment of Telangiectasia and for epilation.

**ACe-Tip™ Advanced Composition Alloy**

- **ACe-Tip™ Technology Advantages:**
  - Minimal adherence of tissue
  - Low absorption
  - Tissue preservation

The ellman® ACe-Tip™ electrodes are designed to reduce resistance/impedance which causes less undesired lateral heat compared to tungsten steel electrodes.

A 45% reduction in the zone of hyalinization has been demonstrated.

ACe-Tip™ electrodes glide smoothly through tissues and are excellent for sculpting and tissue shaping.

The ellman® Micro, Mini and Mono Stan Forceps simultaneously dissect and coagulate tissues using the 4.0 MHz radiofrequency.

The insides of tips on the Mini Mono and Mono Stan Forceps are serrated.
The ellman® Cosmetic Treatment Package is an effective, comfortable way to remove small unsightly “spider veins” with minimal recovery time, minimal scarring and immediate improvement in appearance.

With the advent of ellman® radiowave sclerotherapy, many small facial veins can now be treated without surgery or injections.1

**Non Ablative Skin Tightening Handpieces**

FDA 510(k) pending. Skin Tightening product is only available to physicians outside the United States.

Tighter skin without surgery

Unlike prior generations, today’s adults are proactive about their health and appearance. They want to look as young as they feel. With increasing numbers, our younger, more active patients are having the early signs of aging such as “crows feet” and frown lines. They are requesting non-invasive, non-surgical procedures that have little, if any, down time.

**DHPK1**

Non-Ablative Skin Tightening Handpiece Introductory Kit, Reusable.

Includes one each of the 5mm, 10mm, 15mm, and 20mm Dome Handpieces.

One package of Corneal Eye Shields, 25 patient education brochures and instructions for use.

Only used with the Surgitron® Dual Frequency RF™/120 IEC for skin tightening.
